

2025 Recap: Resilience and Reinvention in Indian Chemicals

By **CID Editorial Team** - January 23, 2026

2025 was a defining year for India's chemical industry, marked by resilience, consolidation and strategic transformation. Despite global demand volatility and geopolitical uncertainties, Indian chemical companies strengthened their global footprint through capacity expansions, acquisitions and export diversification. Sustainability moved from intent to execution, with accelerated investments in green chemistry, energy efficiency and circular economy initiatives. The China-plus-one strategy continued to benefit Indian manufacturers, while policy support through PLI and infrastructure push improved long-term competitiveness. Digitalisation, AI-led process optimisation and specialty chemicals growth emerged as key differentiators, positioning the industry for a more innovation-driven and sustainable future.

TCE Acquires CDI Engineering Solutions, USA

Tata Consulting Engineers (TCE) acquired US-based CDI Engineering Solutions to strengthen its global design, engineering, and project management capabilities. The move enhances TCE's presence in North America and its ability to deliver sustainable and innovative projects worldwide.
