PERSONAL

35+ years with CDI/TCE

Karen.Myrick@tataconsultingengineers.com

Hobbies include traveling, gardening, and drawing. Gains great satisfaction volunteering at local community food banks

Karen Myrick is Vice President and Business Head of the Project and Construction Resource Solutions Business Unit at Tata Consulting Engineers USA. She brings over 35 years of professional experience in engineering services and technical resourcing, with a proven record of building lasting client relationships, delivering operational excellence, and leading high-performing teams for customers in the chemicals, oil & gas, manufacturing, and energy sectors.

Since joining the organization in 1991, first with CDI Engineering Solutions, and now Tata Consulting Engineers USA, she has managed multi-regional operations generating over \$35 million in annual revenue and serving major national accounts with more than 350 technical professionals. Her leadership is widely respected by clients and colleagues alike for her dedication, integrity, and results-driven approach.

Experience includes management of eight business units with full P&L responsibility, directing all unit operations including business development, strategic planning, financial reporting, contract negotiations, and personnel administration. Karen has led the implementation of several major contingent labor programs, transitioning up to 200 personnel across customer's facilities in multiple states, after successfully winning sole-source contracts.

Previous roles within the organization included Business Development Manager for engineering and staffing services, working closely with customers to determine best service-delivery strategies, whether turn-key engineering projects, contingent labor needs, or managed staffing programs. Activity included regional and corporate sales initiatives.

As Human Resources Generalist, Karen oversaw recruiting, new hire orientation, and benefits administration, assisting in development and implementation of company HR policy and procedures. This early experience set the stage for the talent acquisition and retention strategies, and the development of a network of technical resources, that allow her to meet the demands of her current role.

Karen most enjoys working closely with customers, developing long term relationships, to ensure optimum service delivery and customer satisfaction. She takes great pride in helping our employees achieve long-lasting and rewarding careers, and supporting our customers with exceptional talent.

A graduate of Carnegie Mellon University, she moved from Pittsburgh, Pennsylvania to the Houston, Texas area after graduation, working primarily in the energy, oil & gas, and chemicals sectors, and now expanding into new industries with TCE.
