PERSONAL

In his free time, Vivek enjoys travelling, music and reading

With over a decade of experience across strategy consulting, infrastructure, energy and large scale project execution, Vivek Singh brings a unique combination of strategic thinking and execution excellence. He has built a strong track record of driving enterprise growth, transformation and value creation by translating long term vision into measurable business outcomes. His expertise spans corporate strategy, M&A, investment advisory, business transformation and programme leadership across global markets.

As Head of Strategy at Tata Consulting Engineers, Vivek leads the company's enterprise strategy, long-term growth planning and transformation agenda. He works closely with business leaders to identify growth opportunities, strengthen competitive positioning and drive both organic and inorganic expansion. His leadership has been instrumental in shaping TCE's strategic direction across high-growth sectors, including energy transition, digital engineering and sustainable infrastructure, while ensuring strategy is closely aligned with business execution.

Prior to joining TCE, Vivek was Associate Vice President with EY Parthenon, the Strategy & Transactions practice of Ernst & Young, where he advised clients across strategy, mergers and acquisitions and investment advisory. He led engagements spanning India, the Middle East, Europe and the United States, delivering strategic insights that supported investment decisions, business transformation and sustainable growth.

Earlier, Vivek served as Deputy General Manager, Strategy & Planning, at Jio bp, the joint venture between Reliance Industries and BP. He played a key role in developing the company's electric mobility business, shaping growth strategy, building strategic partnerships and driving new business models across EV charging, battery swapping and mobility solutions.

He began his career with Reliance Industries Limited, where he spent six years leading the execution of large-scale petrochemical projects. This strong engineering foundation continues to shape his practical, execution oriented approach to corporate strategy, enabling him to bridge long-term vision with operational delivery. His ability to connect strategic ambition with disciplined execution has consistently helped organisations accelerate transformation while creating lasting business impact.
